

Currency Amount Formatting Guidelines

CIS UX uses the [Common Locale Data Repository \(CLDR\)](#) to standardize currency and amount formatting.

CLDR specifies:

- Whether the currency symbol appears before or after the amount, and whether there is a space (e.g., \$250 or 250 \$).
- Whether the currency uses decimals (e.g., Japanese Yen does not use minor units/cents).
- Whether to use a decimal point or a comma for non-integer amounts (e.g., 37,50 or 37.50).
- How numbers are grouped (e.g., 10,000 or using spaces).

CLDR cannot standardize the level of detail for currency display in different contexts; for example, it cannot determine when to display "Currency Symbol + Amount," or "Currency Symbol + Amount + ISO Code." Therefore, this document will further standardize the formatting and usage guidelines for currency prices.

1. Basic Composition

	Currency Symbol	ISO Currency Code	Amount Figure
Style	<div>以美元为例</div> <div>\$12.50</div> <div>货币符号</div>	<div>以美元为例</div> <div>USD 12.50</div> <div>ISO 代码</div>	<div>以美元为例</div> <div>\$1,250.50</div> <div>千位分隔符 小数点 金额数字</div>
Definition	A Currency Symbol is a graphic symbol or character used to represent a specific currency. It is usually placed before or after the currency amount to indicate the monetary unit used.	The ISO Currency Code is a set of standard codes defined by the International Organization for Standardization (ISO) to represent currencies of different countries and	The Amount Figure is the numerical value representing the quantity of money. The amount figure can be an integer or a decimal, depending on the specific value.

	<p><i>The currency symbol and the currency unit name (text) do not appear simultaneously. For example: if the "¥" symbol is added before the amount, the character "元" (Yuan) should not be added after the amount.</i></p>	<p>regions. These codes usually consist of three letters to identify specific monetary units.</p>	
Notes	<ul style="list-style-type: none"> • Currency price formats vary by country. <ul style="list-style-type: none"> ◦ China (Symbol prefix, no space): ¥10 ◦ USA (Symbol prefix, no space): \$10 ◦ France (Symbol suffix, with space): 10 € • Currency symbols may be the same across different countries. <ul style="list-style-type: none"> ◦ USA: \$10 USD ◦ Singapore: \$10 SGD ◦ Australia: \$10 AUD 	<ul style="list-style-type: none"> • The position of the ISO code aligns with the currency symbol. <ul style="list-style-type: none"> ◦ China (ISO prefix): CNY 10 ◦ USA (ISO prefix): USD 10 ◦ France (ISO suffix): 10 EUR • There is always a space between the ISO code and the amount figure. <ul style="list-style-type: none"> ◦ China (With space): CNY 10 ◦ USA (With space): USD 10 ◦ France (With space): 10 EUR 	<ul style="list-style-type: none"> • Separators and non-integer amount display formats vary by country. <ul style="list-style-type: none"> ◦ USA: \$1,250.20 (Thousands separator is ",", Decimal point is ".") ◦ China: ¥1,250.20 (Thousands separator is ",", Decimal point is ".") ◦ Japan: ¥1,250 (Minimum currency unit is 1 / No decimals) ◦ France: 1 250,20 € (Thousands separator is a space, Decimal point is ",")

2. Common Format Types

Short	Standard	Explicit
\$12.50	USD 12.50	\$12.50 USD
Most concise	Default balance	Highest clarity

<h3>Short Format</h3> <p>When there is a distinct currency field in the interface, the Short Format can be used to avoid information redundancy.</p>	<h3>Standard Format</h3> <p>The most frequently used format in CIS, used for amount display in B2B systems like Finance and Procurement; it ensures currency accuracy while maintaining concise information display.</p>	<h3>Explicit Format</h3> <p>Primarily used for displaying product amounts; the currency symbol helps users better perceive the product price, while the ISO code avoids ambiguity in multi-currency environments.</p>
--	--	---

2.1 Short Format

Formatting rules

- A currency amount consists of **a currency symbol + a number**.

- **Spacing between the symbol and the number**

Follow local formatting conventions. Typically, **the US, China, Singapore, and Japan** do **not** use a space, while **some European countries** do.

- **Symbol position (before or after the number)**

Follow local formatting conventions. Typically, **the US, China, Singapore, and Japan** place the symbol **before** the number, while **some European countries** place it **after**.

US: \$10, €10

France: 10 \$, 10 €

[Common currency formats by country](#)

以美元为例

✔ 正确示范

\$12.50

遵循美元的展示规则:

- 货币符号和数字之间没有空格
- 货币符号展示在数字之前

✘ 错误示范

\$ 12.50

货币符号和数字之间不应该有空格

12.50\$

货币符号需展示在数字前

以欧元（法国）为例

✔ 正确示范

12,50 €

遵循欧元（法国）的展示规则:

- 货币符号和数字之间有空格
- 货币符号展示在数字之后

✘ 错误示范

12,50€

货币符号和数字之间需要加空格

€12.50

货币符号需展示在数字之后

Short Format Use Cases

- When the amount is used for **price display** on the page and the **currency is unambiguous**, use the **simplified format**.
- This keeps the UI clean while still clearly communicating the **amount (and its currency context)**.

Scenario	Example
<p>Price display</p> <p>Used to show prices for flights, trains, hotels, and similar cases.</p> <p>Best for scenarios where the currency is unambiguous and users are highly familiar with the pricing context.</p>	

2.2 Standard Format

Formatting rules

- A currency amount consists of an **ISO code + a number**.

- Spacing between the ISO code and the number. **Always include a space** (applies to all currencies).
- **ISO code position (before or after the number)**

Follow local formatting conventions. Typically, **the US, China, Singapore, and Japan** place the ISO code **before** the number, while **some European countries** place it **after**.

US: USD 10, EUR 10

France: 10 USD, 10 EUR

👉 Common currency formats by country

以美元为例

✅ 正确示范

USD 12.50

遵循美元的展示规则:

- ISO 代码和数字之间有空格
- ISO 代码展示在数字之前

❌ 错误示范

USD12.50

ISO 代码和数字之间需要有空格

12.50 USD

ISO 代码需展示在数字之前

以欧元（法国）为例

✅ 正确示范

12,50 EUR

遵循欧元（法国）的展示规则

- ISO 代码和数字之间有空格
- ISO 代码展示在数字之后

❌ 错误示范

12,50EUR

ISO 代码和数字之间需要有空格

EUR 12,50

ISO 代码需展示在数字之后

Standard Format Use Cases

Scenario	Example
Exchange rate formula When displaying an exchange-rate formula, use the standard format to keep the information accurate and complete .	USD 100 = CNY 714.19 THB 100 = CNY 20.91 AUD 100 = CNY 484.65
Amount confirmation <ul style="list-style-type: none">• When an amount is used for confirmation and there is no separate currency field, use the standard format.• The ISO code can be visually de-emphasized through styling.	<div><div>Basic Information</div><div>Total contract value</div><div>CNY 2,880,248.00</div><div>Revenue or expense</div><div>Revenue</div><div>Term structure</div><div>Fixed term</div><div>Pricing structure</div><div>Fixed</div><div>Term</div><div>Dec 26, 2023 - Jan 11, 2024</div></div>

Table scenarios

When a table does **not** have a dedicated **currency column**, use the **standard format** to ensure accuracy.

供应商	订单总金额
北京水务投资中心	USD 3.28
上海东方有限公司深圳分部	CNY 220.00
新加坡阿迪达斯有限公司	SGD 4,995.71
成都美年达有限公司	CNY 5,220.00
上海蝉花草生物科技有限公司	CNY 220.00
比亚迪汽车有限公司	CNY 220.00

2.3 Explicit Format

Formatting rules

- A currency amount consists of **a currency symbol + a number + an ISO code**.
- **Spacing and order between the symbol and the number**
 - The *precise format* can be understood as **Simplified format + ISO code**.
 - Keep the **symbol–number** display consistent with the **simplified format** (follow local conventions for spacing and position).
- **ISO position (before or after the simplified format)**
 - The ISO code is **always placed after** the simplified format.

US: **\$10 USD, €10 EUR**

France: **10 \$ USD, 10 € EUR**

👉 [Common currency formats by country](#)

以美元为例

✔ 正确示范

\$12.50 USD

遵循美元的展示规则:

- 货币符号在数字之前
- 货币符号和数字之间无空格
- 数字和 ISO 代码之间有空格

✘ 错误示范

\$12.50USD

ISO 代码和数字之间需要有空格

USD \$12.50

ISO 代码需展示在数字之后

以欧元（法国）为例

✔ 正确示范

12,50 € EUR

遵循欧元（法国）的展示规则:

- 货币符号在数字之后
- 货币符号和数字之间有空格
- 数字和 ISO 代码之间有空格

✘ 错误示范

12,50 €EUR

ISO 代码和货币符号之间需要有空格

EUR 12,50 €

ISO 代码需展示在货币符号之后

Explicit Format Use Cases

Scenario	Example
<p>Price display for multi-currency scenarios</p> <ul style="list-style-type: none">A currency symbol helps users recognize the price value more quickly. In a multi-currency context (e.g., the procurement marketplace), include the ISO code as a supporting cue.If the precise format feels too information-dense, use visual styling to de-emphasize either the currency symbol or the ISO code.	<div><div>✔ 商品价格建议同时展示货币符号和 ISO 代码</div><div><div></div><div>京东</div><div>惠普 (HP) F6V27AA 680黑色墨盒 (适用HP DeskJet 5078)</div><div>¥72.00 CNY</div><div>📦 有货 📦 已售130</div><div>加入购物车</div></div><div><div></div><div>内购商品</div><div>Singapore Amazon Gift Card tango Account Number...</div><div>\$72.00 SGD</div><div>📦 有货 📦 已售130</div><div>加入购物车</div></div></div> <div><div>🚫 对于部分币种，不使用 ISO 代码会产生歧义</div><div><div></div><div>京东</div><div>惠普 (HP) F6V27AA 680黑色墨盒 (适用HP DeskJet 5078)</div><div>¥72.00</div><div>📦 有货 📦 已售130</div><div>加入购物车</div></div><div><div></div><div>内购商品</div><div>Singapore Amazon Gift Card tango Account Number...</div><div>\$72.00</div><div>📦 有货 📦 已售130</div><div>加入购物车</div></div></div>

3. Visual hierarchy and emphasis

Primary	Secondary	Tertiary	Custom
<div><div>已申请金额</div><div>CNY 2,000.00</div><div>采购订单总金额</div><div>CNY 6,000.00</div></div>	<div><div>结算合计金额</div><div>CNY 2,000.00</div><div>+ 添加发票</div></div>	<div><div>供应商</div><div>订单总金额</div><div>北京水务投资中心</div><div>USD 3.28</div><div>上海东方有源设备租赁有限公司</div><div>CNY 220.00</div><div>新加坡明通达利有限公司</div><div>SGD 4,995.71</div><div>成都美华达有限公司</div><div>CNY 5,220.00</div><div>上海解花卓生物科技有限公司</div><div>CNY 220.00</div><div>比亚迪汽车有限公司</div><div>CNY 220.00</div></div>	<div><div></div><div>内购商品</div><div>Singapore Amazon Gift Card tango Account Number...</div><div>\$72.00 SGD</div><div>📦 有货 📦 已售130</div><div>加入购物车</div></div>
Used for highlighting the most important	Used in conjunction with Primary; typically	Used for data display requiring no special	If the three default formats cannot meet

amounts on the page, such as page total amounts, contract amounts, procurement amounts, etc.	used for module-level amount summaries (Secondary) versus page-level summaries (Primary).	visual treatment, such as forms and tables on the page, following the specifications of the respective business components or UD components.	requirements, the currency amount style can be customized. The font and size of the ISO, Symbol, and Number can be adjusted based on the UD Text Style.
--	---	--	---

4. Data Format Variants

4.1 Negative Number Format

In any format, the negative sign must be placed at the **very beginning** of the entire currency amount display.

<div>  正确示范 </div>		<div>  错误示范 </div>	
美元	欧元（法国）	美元	欧元（法国）
-\$12.50	-12,50 €	\$-12.50	12,50 €-
-USD 12.50	-12,50 EUR	USD -12.50	12,50 EUR-
-\$12.50 USD	-12,50 € EUR	\$-12.50 USD	12,50 € EUR-

4.2 Separated Currency & Amount

If all amounts in an entire page or module are of a single currency, to avoid the redundancy of repeatedly displaying currency symbols and to keep the page concise, **the currency can be specified using the ISO code in the title area, with only numbers used in the page or module below.**

Scenario 1: Used in Forms	Scenario 2: Used in Tables
---------------------------	----------------------------

Display the currency in the module title; the corresponding form fields can display numbers only.

Overview (USD)

Amount 1

325,130,000.00

Amount 2

125,130,000.00

Total amount

450,260,000.00

Display the currency in the table header; the corresponding table fields can display numbers only.

供应商	订单总金额 (CNY)
北京水务投资中心	3.28
上海东方有限公司深圳分部	220.00
新加坡阿迪达斯有限公司	4,995.71
成都美年达有限公司	5,220.00

5. Currency Display Enhancements

5.1 Large Amount Estimation

Estimation scenarios

- When encountering scenarios with extremely large amounts, the amount needs to be estimated to assist users in making a preliminary judgment of the value.
- Whether to enable amount estimation depends on the business context.

Estimation rules

- Estimated amounts should prioritize using the largest unambiguous unit for display to make the numbers more concise and readable.
- When the estimated value equals the actual amount value (equivalent estimation), do not display "Approx."
 - Example: **425,000,000.00** → **425M**
- Estimated amounts are rounded to two decimal places.
 - Example: **425,130,000.00** → **Approx. 425.13M**
- If the last two decimal digits are **0**, do **not** display them.
 - Example: **420,100,000.00** → **Approx. 420.1M** (or 约 4.2 亿)
 - Example: **420,000,000.00** → **420M** (or 4.2 亿)
- In different language environments, the units for amount estimation vary; the display of estimation units can be visually de-emphasized through design techniques.

- Chinese units: 万, 百万, 千万, 亿, 兆
- English units: K, M, B, T (*thousand, million, billion, trillion*)

非等值估算

	中文	English

5.2 Currency Conversion

Type 1: Inline Display

Display both the original currency and the converted currency information simultaneously in the interface layout, allowing users to obtain complete currency comparison information without additional actions.

Usage guidelines

- Applicable to scenarios where users need to view both the original and converted currencies simultaneously for comparison and decision-making.

- Based on the common-format visual guidelines, we provide three levels—**Primary**, **Secondary**, and **Tertiary**—so you can choose flexibly based on **information priority** and the **use case**.
- Tooltip copy can be **customized** based on business needs.

Type 2: Display in Popover

 After the user clicks the "Currency Conversion" button, the converted target currency is displayed within a Popover, without interfering with the main interface layout. **Usage guidelines**

- The converted currency is secondary compared to the original currency; even if the user does not know the converted currency and amount, it does not affect their judgment of the field.
- We provide both **wrapped** and **single-line (no-wrap)** layouts. Choose based on **container width** and **content layout**.

- Based on the common-format visual guidelines, we provide three levels—**Primary**, **Secondary**, and **Tertiary**—so you can choose flexibly based on **information priority** and the **use case**.
- Popover copy can be **customized** to meet business requirements.

5.3 ISO Code Explanation

- Considering internationalization scenarios, currencies such as GBP, VND, MYR, etc., may increase user recognition costs if the full currency name is not included. For ISO codes that users may be unfamiliar with, a **tooltip** should be added for explanation.
- This interaction can be omitted for common currencies, displaying the ISO code directly, such as CNY, USD, JPY, etc.
